

Final Project Memo

What has been implemented in this app?

To get started with this app, please visit 'localhost:3000/welcome'.

1 First of all, the app contains two error page in the picapp folder

error.html is showed when user is visiting something that requires user to login at first, e.g. '/home'. Click on the Pictures would return to the welcome page.

Pictures

Oops!

It seems you have not logged in.

Click on the Pictures above to go to the login page.

Error2.html is showed when user is visiting something that should not be seen by users, e.g. '/users'. The routes for '/users' is generated by “:resources users”. But it should not be seen by the user.

Pictures

Oops! You are looking at the wrong place!

What are you thinking by hitting this URL?

Click on the Pictures above to go to the login page

2 When creating a new user, all the fields are required.

Email will be checked if it is a valid email address, so please use a valid email when testing the app. Avatar is also required. An email would be sent to the user after a new account has been made.

es - Mozilla Firefox
:ures
localhost:3000/users/new

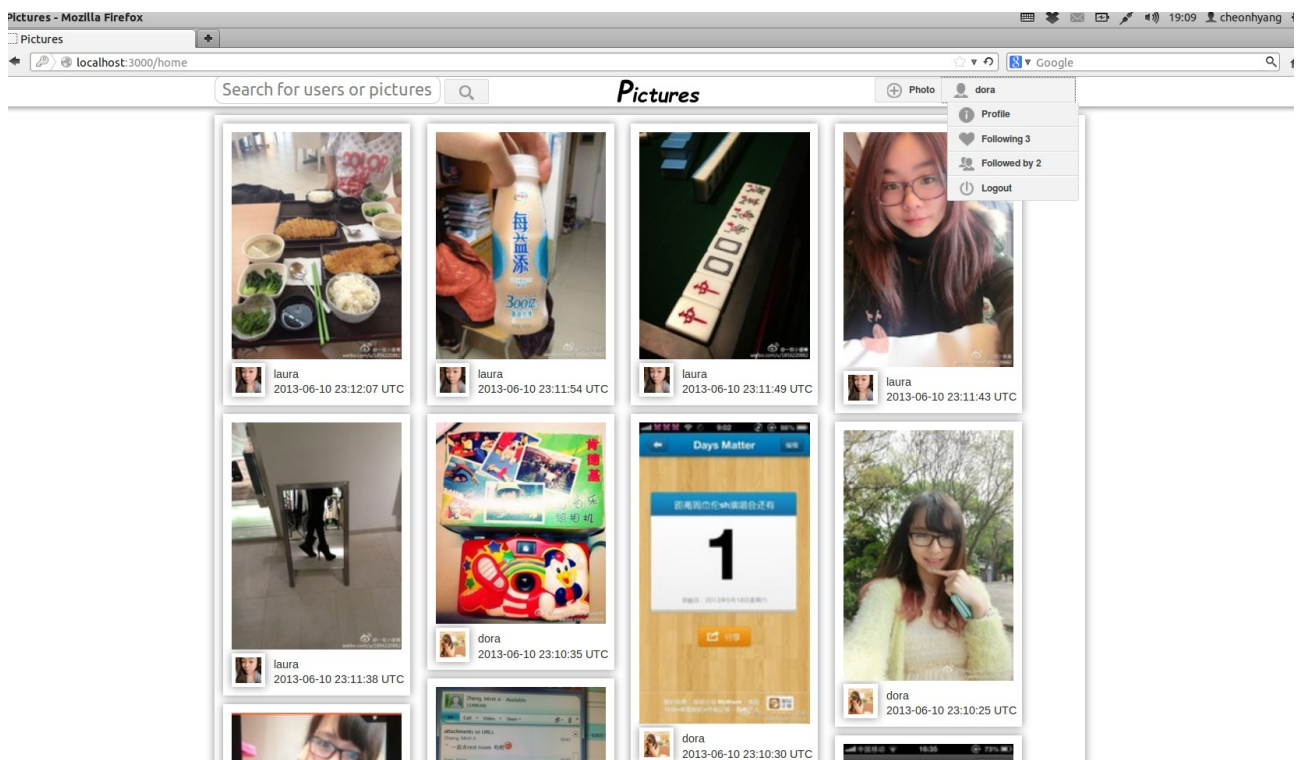

Welcome to

3 After successfully logged in, you will see the home page.

You can add a new photo to your account by clicking the + Photo on the upper right.

You also can see your username button. By clicking that you can view your profile, see your following users, your followed users and logout. In the menu, you can see how many users you are following and followed.

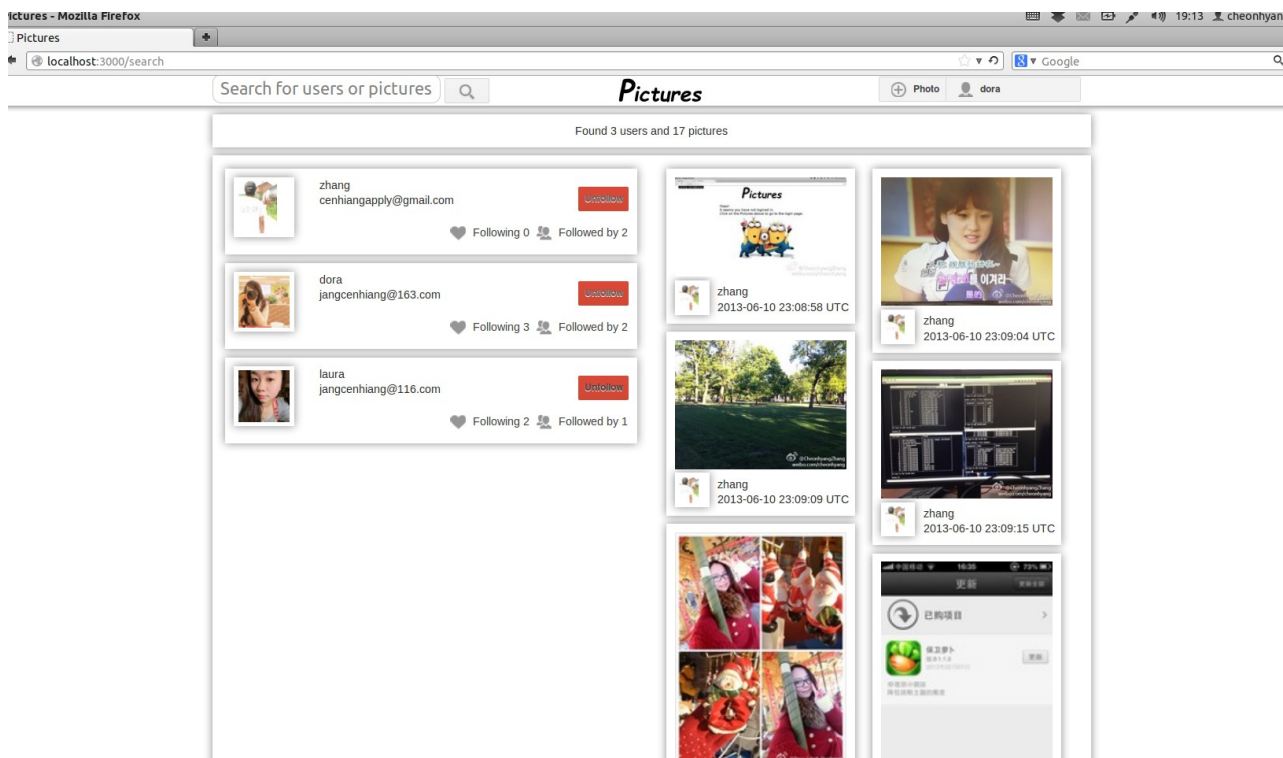

Every pictures shown in home page, you can click on that and see the detail of the picture.

Also, you can click on the little avatar of user that posted the picture to see his home page.

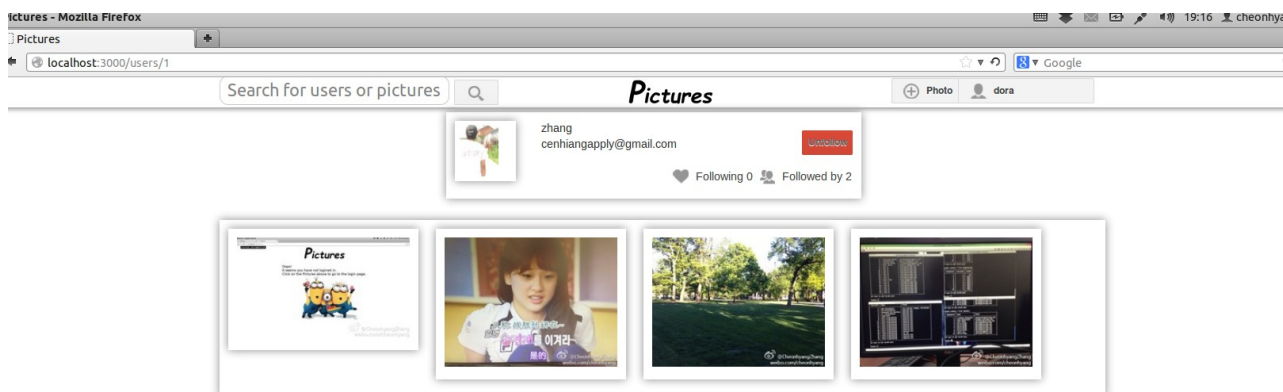

All pictures are shown by the time order. Newly posted pictures are shown first.

4 About the search box on the upper left, you can click on the search button with no content input. This will give you all the users and photos. If you have input something there, all username or picture detail or picture tag that matches will be shown to you.

On this page, you can follow or unfollow the user. You can also see his following list or follower list by clicking corresponding contents. All pictures and user avatars are clickable which makes it a good user experience.

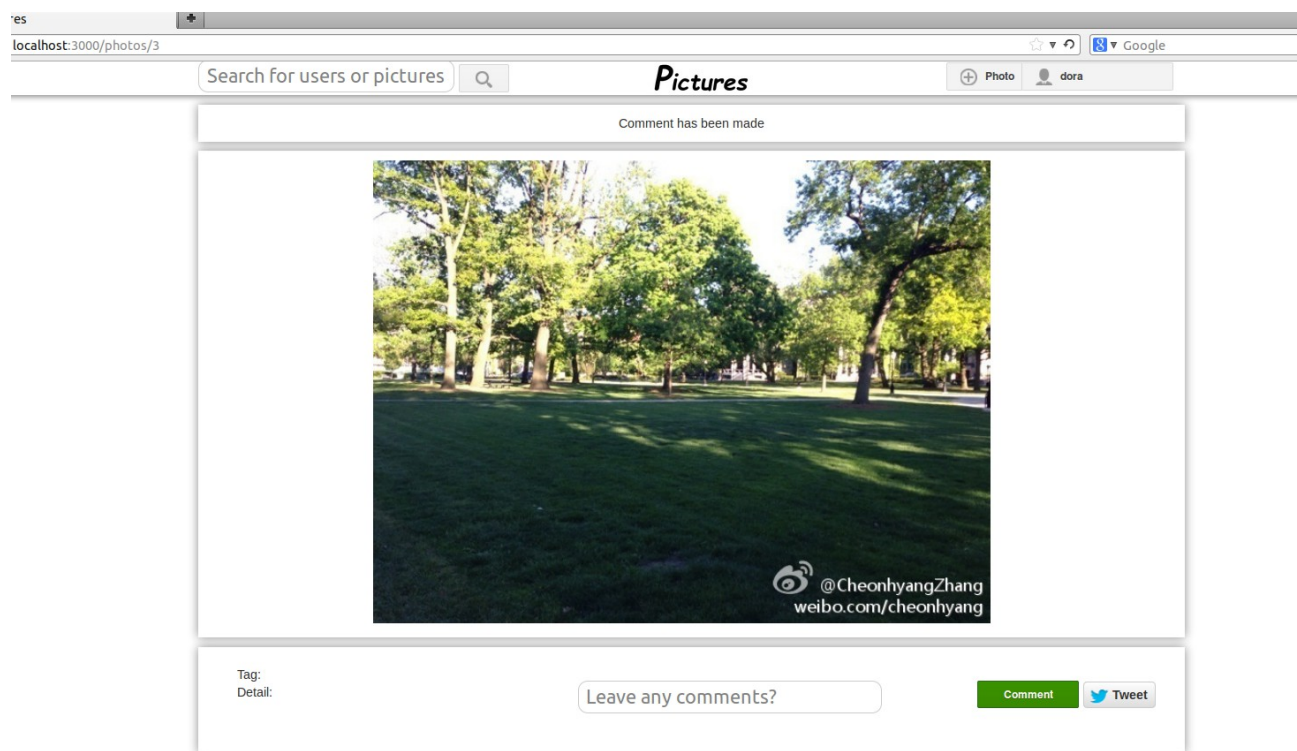

5 If you click on any avatar of the user, you will go to his home page as shown below:

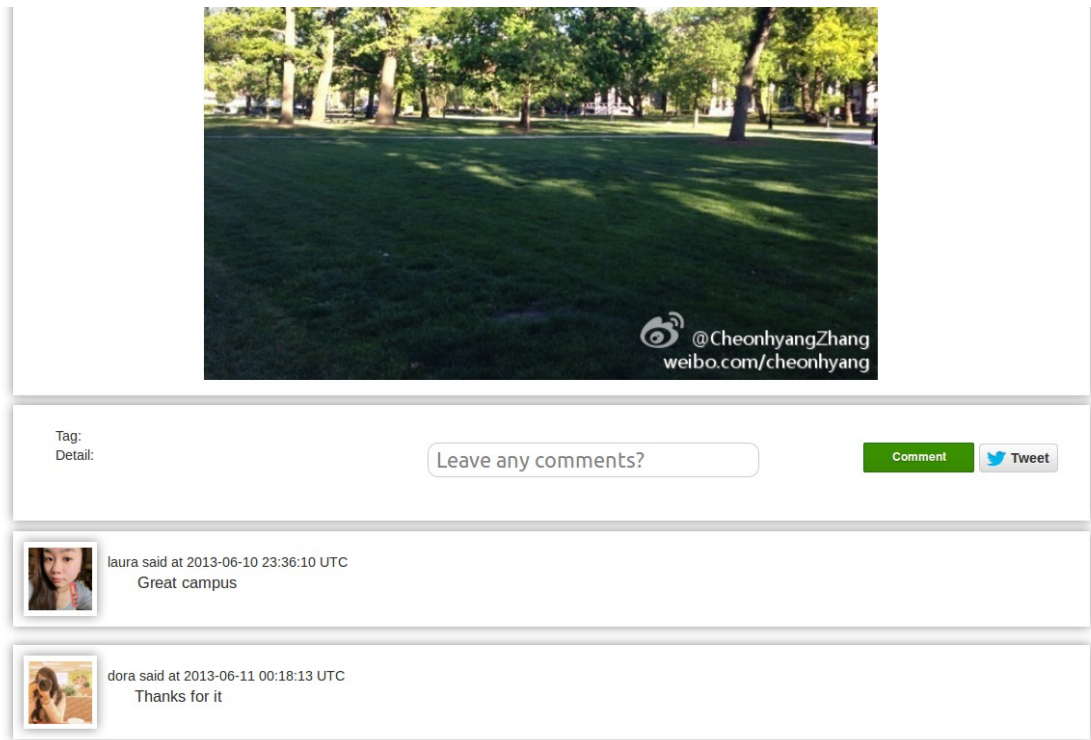

6 In the detail of the picture page. You can see the full size of the picture, the tag and the detail of the picture(of course in the example below, no tag and detail is shown because the poster didn't write any).

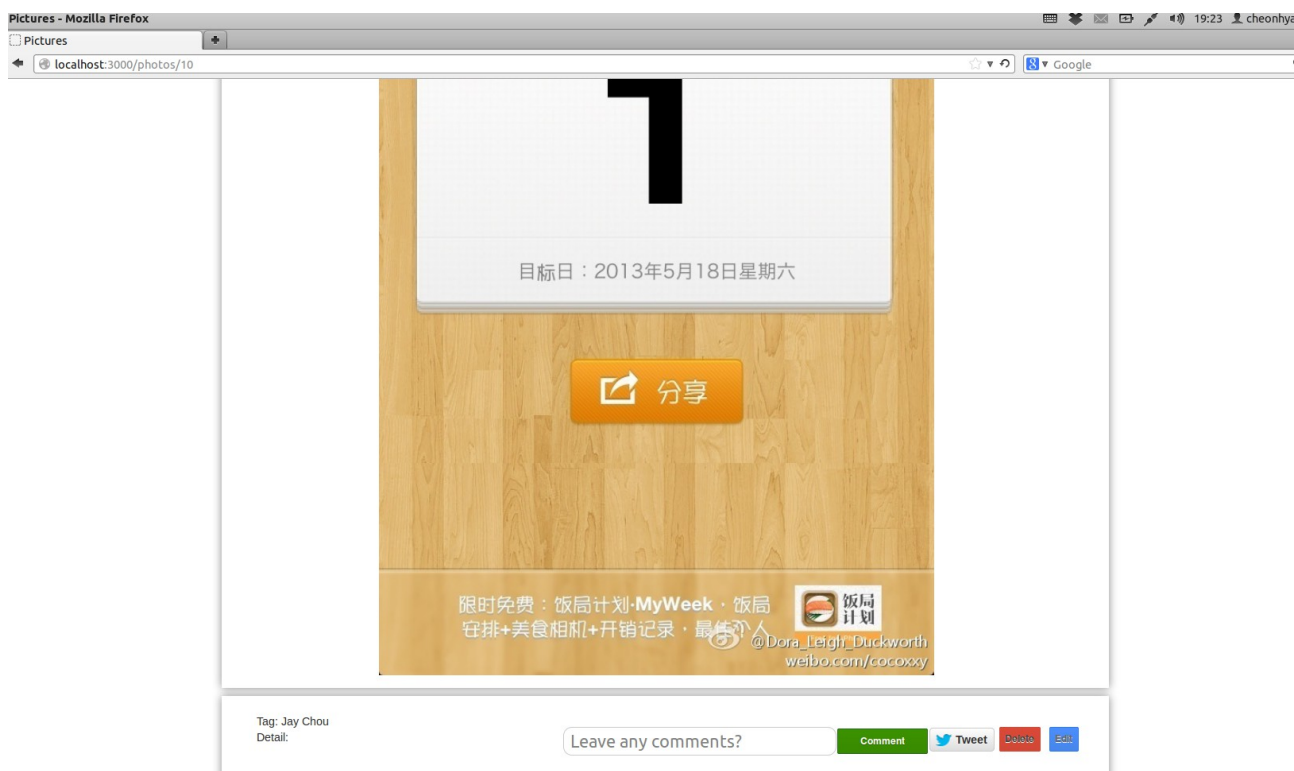

You can also comment on this picutre and also tweet the link to this page. However, since the app runs locally, the tweet button would not include the link like "localhost....".

All the comments made to this picture are shown right below the picture.

7 If you are visiting a picture that is posted by you. You can see more buttons.
You can either delete this picture or edit it.

If you have any problem with this app,
feel free to contact me.
